

Proposal

1-background of the project

We want to make a system. From this system; you can manage your financial accounts of sales, expenses and stores and we are keen on the ease of use of the system.

2-problem

We were facing difficulty to link each sold item with its raw material .the next problem, we were facing, when the sale is done, the raw material decrease automatic.

3-objectives

We can use our learning to make strong system and this system is depended on it in the shortest possible time.

4-purpose

We should learn well and build strong foundation to make this project and product best system. This is our plan.

5-Assumption

From our assumption, this system can be best system for one single branch not network of stores. Meaning the database is local for one store.

6-limitations

We faced a lot of problems in errors, when we work on WinForms. Our inexperience in general. Lack of resources and time compared we make this project for the first time.

7-Methodology

We made plan for our team. In this plan we manage our time to learn new languages from the start of term. We set the steps to build this project from learning to implementing.

8-structure

We met to set our resources and we decided to set the leader of the team .this person has responsibility to put our tasks and the resource of our learning. Every day, a meeting takes place, to show our tasks completed in the day .everyone in this team were helping other.
